

MYSQL DATABASE MANAGEMENT SYSTEM

LAB SHEET #9

Title:

- Using Views in MySQL database

Objectives:

- To understand and implement concept of various types of views in MySQL
- To understand and perform SELECT, INSERT, UPDATE, DELETE queries in simple and updatable views

Background Concept:

- **CREATE VIEW**
 - CREATE VIEW <view_name> AS <select_query_expression> [WHERE <condition>];
- **READ FROM VIEW**
 - SELECT <list_of_columns> FROM <view_name> [WHERE <condition>];
- **INSERT INTO VIEW**
 - INSERT INTO <view_name> (<column_list>) VALUES (<list_of_values>);
- **UPDATE IN VIEW**
 - UPDATE <view_name> SET <column> = <value> [WHERE <condition>];
- **DELETE FROM VIEW**
 - DELETE FROM <view_name> [WHERE <condition>];
- **DROP VIEW**
 - DROP VIEW [IF EXISTS] <view_name>;

Lab works:

1. Create a simple view containing basic details like id, name, age, department
2. Create a simple view with id, name and age for IT department employees only
3. Create a complex view showing id and name of employee, name of company, city and salary
4. Create a complex view showing department name and average salary per department
5. Read names of employee with age greater than 25 from view created in Qn 2.
6. Create a view from WORKS relation, and update salary of employees by 3000 working in company with id 102
7. Create a simple view of company, and update city of 'F1Soft' company to 'Kavre'.
8. Add new company record through company view
9. Insert a record of new employee through view created in Qn 1
10. Delete records of employees with age less than 25 working in IT department
11. Delete a record of company added in Qn 8
12. Remove all views created
